

## Aussie O Fruit Juice Company

Melbourne, Australia

**“We are very impressed with the Microgenix System and its ability to kill the airborne bacteria. Product spoiling is of great concern to us and this system translates to real dollar savings”.**

*John Butler,  
Operations Manager,  
Aussie O.*

### The Customer

Aussie O Fruit Juice Company is Australian owned and operated. The Company does contract bottling for a variety of customers and recently secured a deal to bottle a new line of drinks for a national brand. The client stipulated that the bottling line should meet stringent air quality requirements.

Timing was extremely important, as production was due to commence within 10 days.

### The Benefit

The Microgenix System was chosen by Aussie O over conventional HEPA systems for its ability to kill a wide range of contaminants that could affect the product. The system gives Aussie O the security of knowing that the product coming off the line is free from possible contamination.

The installation employed a MD170 duct mounted unit with inlet air pre-filtration and supply fan. Work was completed within the required time frame allowing production to commence as scheduled.
